## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Specification***

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: PNEUMATIC RADIAL TIRE WITH POLYETHYLENE TEREPHTHALATE CORD BELT REINFORCING LAYER.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The subject matter currently in parentheses is necessary for defining the claim terms and so should not be in parentheses. One way to overcome this rejection would be to change “adhesive treatment (dip treatment)” to -- adhesive dip treatment -- in claim 5 line 2 and to remove the parentheses in claim 6.

### ***Allowable Subject Matter***

5. Claims 1-4 and 7-9 are allowed.
6. Claims 5 and 6 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Art Unit: 1791

7. The following is a statement of reasons for the indication of allowable subject matter: Japanese Patent Application 2001-63312 A discloses a pneumatic radial tire similar to the claimed tire but does not disclose the PET belt reinforcing layer cord or cords having the claimed elastic modulus measured at the claimed load and temperature, and the remaining prior art of record fails to disclose or suggest the claimed pneumatic radial tire including the PET belt reinforcing layer cord or cords having the claimed elastic modulus measured at the claimed load and temperature.
